Highest Quality Products and  
Service in the Industry

**QUALITY SERVICE & SUPPORT**

**CUSTOMER SATISFACTION**

**EXPERIENCE**

**COMPLETE LINE OF PRODUCTS**

**SERVING OVER 300 CREDIT  
UNIONS AND GROWING**

FSSI is a privately held company that was formed in December of 1992 for the purpose of providing services to Credit Unions. It arose out of the merger of two companies, Peripheral Products and Services in Rosharon, TX, and Pysm Products and Services in Farmington Hills, MI. Both companies were involved in providing computer equipment, maintenance, and software to Credit Unions. The merger of Vision in 1997 completed our goal of being a full service Credit Union provider. Together we have continued to develop a base of Credit Union customers that are receptive to a company that puts customer service, support and satisfaction first.

The principals of FSSI have a combined 46 years of experience working with Credit Unions and 79 years working in Data Processing Systems. Experience in Data Processing ranges from management, marketing, consulting, systems design, support and analysis, programming, maintenance, and contracting development for Fortune 500 companies. As examples, we have been involved in the design of a Credit Union software system and product design and promotion for large computer and automotive manufacturers.

Revenue growth has averaged 35% for the years we have been in business and today we do business with more than three hundred Credit Unions in the United States, the Bahamas and Caymans.

We offer a full-featured Credit Union Software System, disaster recovery systems, computer systems and supplies, equipment maintenance, web site design and operation, network design, installation and maintenance, and we have been active in testing customer systems. The Disaster Recovery programs include Planning, Hot Site and Hot Replacement, and Expedited Replacement.

Equipment sales include almost everything a Credit Union could need in new and used hardware. Some of our customers consider us their sole equipment supplier.

We offer computer related supplies at the request of our customers. We offer everything that relates to Data Processing including cartridges for copiers.

Vision Genesis for small Credit Unions is designed to be a user installed system to do CU accounting and is Windows® based. Vision XXI is designed for medium sized to very large Credit Unions. It is WindowsNT® server based with Windows workstations and has state-of-the-art business features and functions.

We will continue to do business exclusively with Credit Unions and produce products and services that are the highest quality in the industry.
