CONSULTING FOR EVERY CREDIT UNION REQUIREMENT

Whether you're looking for a project to be started or completed, advice, or temporary staffing, FSSI can supply the people who can help you check off these requirements.

We can assist in the **PLANNING** for supervisory committees, purchasing, recovery integration, branch networking, archiving, RFP preparation and evaluation, and maintenance cost reduction.

On the **OPERATIONS** side we have helped in accounting, internal controls and analysis, procedures manuals, and operations reports and analysis. We have replaced vacationers such as CEOs, loan and accounting supervisors, and data processing managers.

We have produced, taught and **TRAINED** employees in fields as diverse as accounting, loan supervision, data processing and networking.

FSSI has **INSTALLED** new software which includes all **Windows®** products including networks for both Windows and Novell. We have converted and documented Credit Union software vendor changes and edited and produced procedures manuals.

SECURITY has to be foremost in the Credit Union CEO's mind. Staff must feel safe, hackers need to be excluded, and procedures must be in place to account for cash control. Members accounts have to be correct all of the time. FSSI has experience in resolving all of these concerns.
