INDEPENDENT HOME BANKING

Vision Member eCom Banking (VMeB) is an easy way for your members to conduct business from their home, business or on vacation in the caymans. VMeB is designed to provide a home banking system for any software system that you may use for your core processing system including all VISION core systems. FSSI can link to any vendor at an affordable cost providing they have an external interface. If you implement in house you will save WEB hosting charges. FSSI can also host both VMeB and your current web site at affordable rates. Both techniques provide host internet isolation to ensure the integrity of your core system. We do not charge transaction fees so you have more flexibility for member charges for the service. We also have no charges for the members that participate.

Custom design is one of our strengths and will enhance your ability to market the product to your members. We can assist you in this effort with proven announcements, flyers and recorded messages.

This can be the first step in reducing your total transaction costs and providing a more substantial offering than audio response when you use Bill Payer as an option. Call us at (800) 377-9053 for more information.
